Springfield, VA | julfri.caguiat@gmail.com | linkedin.com/in/julfri-caguiat | julcaguiat.github.io

SUMMARY

CCNA-certified Network Operations candidate with hands-on experience designing, deploying, and troubleshooting enterprise-style network environments across hybrid physical and virtual infrastructures. Experienced in network monitoring, incident triage, and structured troubleshooting workflows supporting service restoration and incident resolution. Strong foundation in TCP/IP networking, VLAN segmentation, routing protocols, and enterprise infrastructure services including Active Directory, DNS, and DHCP. Exposure to SIEM-based monitoring, endpoint telemetry analysis, and operational alert investigation within NOC-style environments.

CERTIFICATIONS

- Cisco Certified Network Associate (CCNA) - January 2026 | [verify](#)
 - CompTIA Security+ (SY0-701) - August 2025 | [verify](#)
 - SOC Level 1 & Junior Pentesting Training Path (TryHackMe) | 2025 | [verify](#)
-

TECHNICAL SKILLS

Network Operations & Monitoring:

TCP/IP, subnetting, VLANs, inter-VLAN routing, OSPF, ACLs, NAT/PAT, ICMP, traceroute, pfSense firewall, network segmentation, incident triage, troubleshooting, service restoration, performance validation

Cisco Networking & Infrastructure:

Cisco ISR 1941, Cisco Catalyst 2960G, VLAN configuration, switching/routing fundamentals, enterprise topology design, Packet Tracer, CML

Systems & Infrastructure Support:

Windows Server 2019 (AD DS, DNS, DHCP, Group Policy), Windows 10/11 troubleshooting, Linux (Ubuntu/Kali), authentication troubleshooting, endpoint configuration, service desk support concepts

Monitoring & Tooling:

Wazuh SIEM, Sysmon, Windows Event Logs, log analysis, VirtualBox, Proxmox VE, Peppermint ticketing system, structured cabling (T568B), cable testing tools

FEATURED PROJECT – ENTERPRISE NETWORK & SECURITY OPERATIONS PLATFORM | [Portfolio](#)

Enterprise Infrastructure Deployment

- Built a hybrid enterprise network using Cisco routing and switching technologies
- Implemented VLAN segmentation and inter-VLAN routing to support network isolation and controlled communication
- Deployed Windows Server services including Active Directory (AD DS), DNS, DHCP, SMB file sharing, and Group Policy for centralized identity and resource management
- Integrated pfSense firewall for network segmentation, access control, and traffic policy enforcement
- Established structured IP addressing and validated end-to-end network connectivity and service availability

IT Operations & Service Management

- Implemented Peppermint ticketing system to simulate IT service desk workflows including incident tracking escalation, and request management
- Expanded environment with Windows and Linux endpoints to simulate end-user support and enterprise service dependencies
- Performed structured troubleshooting for network connectivity, authentication, DNS/DHCP, and system-level issues using diagnostic workflows
- Configured and validated remote administration tools including RSAT, RDP, and SSH for endpoint support and system administration

Monitoring, Detection & Automation

- Deployed Wazuh SIEM for centralized log collection, monitoring, and operational alerting
- Installed Sysmon and configured agents to collect Windows Event Logs and endpoint telemetry for analysis and investigation
- Monitored authentication activity, system events, and endpoint behavior for incident detection to support incident detection and root cause analysis
- Developed custom detection rules for repeated authentication failures and suspicious login patterns
- Built foundational automation workflows integrating Wazuh, n8n, and Peppermint for alert-to-ticket generation and incident response simulation

ADDITIONAL PROJECTS

3-TIER ENTERPRISE NETWORK SIMULATION (PACKET TRACER) | [PDF](#)

- Designed hierarchical enterprise network using Core, Distribution, and Access layers
- Configured VLAN segmentation and inter-VLAN routing (Router-on-a-Stick, SVIs)
- Implemented OSPF dynamic routing and HSRP redundancy
- Deployed enterprise services including DHCP, DNS, NTP, Syslog, SNMP, and SSH
- Applied ACLs for traffic filtering and network control
- Documented IP addressing schemes and troubleshooting methodology

ISOLATED VIRTUAL SOC LAB | [Link](#)

- Built isolated security monitoring environment using VirtualBox on Windows 11
- Deployed Windows and Linux endpoints with Wazuh agents for centralized monitoring
- Installed Sysmon for endpoint telemetry collection and security visibility
- Configured pfSense firewall for network segmentation and traffic control
- Validated SIEM ingestion pipeline and log analysis workflow in a controlled environment

EDUCATION

Graduate Diploma, Computer Science | University of the Philippines OU - December 2023
B.S., MIS / Decision Science | George Mason University
